====

**Exercice 4** *pluscalex1.tla*

*Ecrire un programme PlusCal qui traduit le protocole suivant : S envoie une valeur à R*

**Exercice 5** *pluscalex2.tla*

*Ecrire un programme PlusCal qui calcule la fonction factorielle de la façon suivante :*

- *Un processus calcule  $1 \times 2 \times 3 \dots \times k_1$*
- *Un processus calcule  $k_2 \times (k_2 + 1) \times \dots \times N$*
- *Les processus stoppent quand la condition  $k_1 < k_2$  est fausse*

**Exercice 6** *pluscalex3.tla*

*Ecrire un programme PlusCal qui calcule la fonction  $L^K$  la façon suivante :*

- *Un processus calcule  $L \times \dots \times L$   $k_1$  fois.*
- *Un processus calcule  $L \times \dots \times L$   $k_2$  fois.*
- *Les processus stoppent quand la condition  $k_1 + k_2 < L$  est fausse*
