Projet Modélisation et vérification des systèmes informatiques
Projet MVSI
par Dominique Méry
17 novembre 2024

Le projet MVSI reprend les notions enseignées dans le cours MVSI. L'idée est d'analyser des programems écrits en C et d'en déduire des propriétés validées à l'aide de la plateforme toolbox et de l'outil Frama-C. Chaque groupe prendra deux programmes et les analysera selon trois méthodes, en visant la correction partielle et l'absence d'erreurs à l'exécution :

— avec la méthode de traduction des algorithmes en PlusCal et la plateforme Toolbox TLAPS

— avec l'outil Framac

Chaque groupe aura deux algorithmes spécifiques. Il les traduira en un algorithme PlusCal équivalent, vérifiera la correction partielle et l'absence d'erreurs à l'exécution. Il se peut que vous trouviez une optimisation à parrtir de votre analyse et dans ce cas, vous indiquerez comment la méthode vous a permis de le faire.

Le rapport à rendre devra expliquer clairement les opérations réalisées. Ce rapport sera synthétique et mettra en avant les difficultés rencontrées et donnera des possibilités d'extension de cet outil. Le dossier final sera une archive contenant les différents éléments concernant la vérification avec chaque outil et le rapport final en pdf.

La date de remise des dossiers est le **15 avril 2025SS** et chaque groupe présentera son travail dans les jours suivants. Un dossier est une archive dont le nom est de la forme nom1-nom2-projet.zip (utilisez zip pour compresser) avec comme sujet "mvsi".

Les groupes seront constitués dès que possible et au plus tard le jour de la rentrée de janvier 2025. Les élèves enverront un fichier excel avec les différents groupes à Dominique Méry. Pour faciliter les mails et leur traitement, il est plus simple de mettre le sujet « mvsi » lors de l'envoi des courriers relatifs à ce projet.

Les sujets possibles sont donnés dans la suite et chaque groupe choisira un sujet qui devra être différent des autres groupes.

1 Groupe 1

1.1 Triangle de Floyd

```
C program to print Floyd's triangle:- This program prints Floyd's triangle. Number
1
2 3
4 5 6
7 8 9 10
It's clear that in Floyd's triangle nth row contains n numbers.
```

```c
#include <stdio.h>

int main()
{
  int n, i,  c, a = 1;

  printf("Enter the number of rows of Floyd's triangle to print\n");
  scanf("%d", &n);

  for (i = 1; i <= n; i++)
  {
    for (c = 1; c <= i; c++)
    {
      printf("%d ",a);
      a++;
    }
    printf("\n");
  }

  return 0;
}
```

1.2 Bubble Sort

```c
* Bubble sort code */

#include <stdio.h>

int main()
{
```

```c
  int array[100], n, c, d, swap;

  printf("Enter_number_of_elements\n");
  scanf("%d", &n);

  printf("Enter_%d_integers\n", n);

  for (c = 0; c < n; c++)
    scanf("%d", &array[c]);

  for (c = 0 ; c < ( n - 1 ); c++)
  {
    for (d = 0 ; d < n - c - 1; d++)
    {
      if (array[d] > array[d+1]) /* For decreasing order use < */
      {
        swap       = array[d];
        array[d]   = array[d+1];
        array[d+1] = swap;
      }
    }
  }

  printf("Sorted_list_in_ascending_order:\n");

  for ( c = 0 ; c < n ; c++ )
    printf("%d\n", array[c]);

  return 0;
}
```

2 Groupe 2

2.1 Shell Sort

```c
 #include <stdio.h>
#include <stdlib.h>

#define SIZE 8

void display(int a[],const int size);
void shellsort(int a[], const int size);

int main()
{
```

```c
    int a[SIZE] = {5,6,3,1,7,8,2,4};

    printf("--- C Shell Sort Demonstration --- \n");

    printf("Array before sorting:\n");
    display(a,SIZE);

    shellsort(a,SIZE);

    printf("Array after sorting:\n");
    display(a,SIZE);

    return 0;
}

void shellsort(int a[], const int size)
{
  int i, j, inc, tmp;

  inc = 3;
  while (inc > 0)
  {
    for (i=0; i < size; i++)
    {
      j = i;
      tmp = a[i];
      while ((j >= inc) && (a[j-inc] > tmp))
      {
        a[j] = a[j - inc];
        j = j - inc;
      }
      a[j] = tmp;
    }
    if (inc/2 != 0)
      inc = inc/2;
    else if (inc == 1)
      inc = 0;
    else
      inc = 1;
  }
}

void display(int a[],const int size)
{
    int i;
```

C

```c
    for(i = 0; i < size; i++)
        printf("%d ",a[i]);

    printf("\n");
}
```

2.2 Power3

```c
.c#include <stdio.h>

int tp(int x)
{int   az,z,v,av,w,aw,t,at,u=0,au;
  z=0;v=0;w=1;t=3; aw=w;az=z;at=t;av=v;au=u;
  while (u< x)
          {
              printf("z=%d  ; v=%d  ; w=%d  ; t = %d; u = %d\n",z,v,w,t,u);
              au=u;
              z=az+av+aw;
              v=av+at;
              t=at+6;
              w=aw+3;
              aw=w;az=z;at=t;av=v;
              u=u+1;

          }
  return(z);
}

int main()
{
  int v;

  printf("Entrez la valeur 8 pour  v\n");
  scanf("%d", &v);
  printf(" voici la rÃ©ponse de votre solution %d --> %d\n",v,tp(v));
  return 0;
}
```

3 Groupe 3

3.1 Programme premier

```c
#include<stdio.h>
```

```c
int main()
{
    int n, i = 3, count, c;

    printf("Enter the number of prime numbers required\n");
    scanf("%d",&n);

    if ( n >= 1 )
    {
        printf("First %d prime numbers are :\n",n);
        printf("2\n");
    }

    for ( count = 2 ; count <= n ;   )
    {
        for ( c = 2 ; c <= i - 1 ; c++ )
        {
            if ( i%c == 0 )
                break;
        }
        if ( c == i )
        {
            printf("%d\n",i);
            count++;
        }
        i++;
    }

    return 0;
}
```

3.2 Selection Sort

```c
#include <stdio.h>

int main()
{
    int array[100], n, c, d, position, swap;

    printf("Enter number of elements\n");
    scanf("%d", &n);
```

```
    printf("Enter_%d_integers\n", n);

    for ( c = 0 ; c < n ; c++ )
        scanf("%d", &array[c]);

    for ( c = 0 ; c < ( n - 1 ) ; c++ )
    {
        position = c;

        for ( d = c + 1 ; d < n ; d++ )
        {
            if ( array[position] > array[d] )
                position = d;
        }
        if ( position != c )
        {
            swap = array[c];
            array[c] = array[position];
            array[position] = swap;
        }
    }

    printf("Sorted_list_in_ascending_order:\n");

    for ( c = 0 ; c < n ; c++ )
        printf("%d\n", array[c]);

    return 0;
}
```
